Overview

Software Developer skilled in Full-Stack development with **Next.js** and the **MERN stack** (React.js, Node.js, Express.js, MongoDB). Solved **1200+ algorithmic problems** across LeetCode, GeekforGeeks, HackerRank, CodeChef, Codeforces, and CSES, covering data structures, graph algorithms, dynamic programming, and optimization techniques.

Education

Lovely Professional University

Aug 2022 – 2026

Bachelor of Technology in Computer Science and Engineering (B.Tech CSE) - CGPA: 7.3 / 10

Skills & Technologies

Programming Languages: Python, JavaScript, TypeScript

Web Development: React.js, Next.js, Node.js, Express.js, Django, RESTful APIs, Redux, Tailwind CSS, HTML5, CSS3

Databases: MongoDB, PostgreSQL, Supabase

DevOps & Tools: Docker, CI/CD, Git, Postman, Figma

Data Structures & Algorithms: Arrays, Hash Maps, Binary Search, Two Pointers, Stacks, Queues, Linked Lists, Trees, Graphs, Dynamic Programming

Development Practices: Agile development, REST API design, code reviews, debugging, performance tuning

Experience

Labmantix, Web Developer

Present

- Designed and maintained customer-facing web applications with an emphasis on stable deployments, modular architecture, and performance efficiency.
- Delivered full end-to-end features across frontend and backend layers using relational and document-based data stores.
- Established secure data access, session management, and real-time features based on defined product specifications.

Projects

Workboard - Project Management Tool ([Live Demo](#))

[GitHub Repository](#)

- Architected a multi-tenant internal platform enabling role-based access and distinct user responsibilities across teams and departments.
- Delivered core workflows including project tracking, task ownership, time reporting, leave management, and goal monitoring, increasing operational efficiency by 40%.
- Integrated AI-assisted features for planning, risk analysis, and automated summaries, reducing manual coordination effort by 35%.
- Automated build and deployment processes, reducing release turnaround time by 60%.
- Tech Stack : **Next.js 15, TypeScript, PostgreSQL, Prisma, Supabase, Redis, Docker, CI/CD**

GoFood - Food Delivery Application ([Live Demo](#))

[GitHub Repository](#)

- Created a consumer-facing ordering platform handling 50+ menu categories with real-time updates.
- Strengthened account safety and purchase flows, lowering unauthorized usage by 90%.
- Enhanced mobile responsiveness and added automated email notifications for order lifecycle events.
- Tech Stack : **React.js, Node.js, Express.js, MongoDB, Bootstrap CSS.**

RoadHealth AI - Pavement Condition Assessment System ([Live Demo](#))

[GitHub Repository](#)

- Built an automated road inspection solution capable of identifying surface defects with up to 85% accuracy.
- Designed image analysis pipelines leveraging computer vision and asynchronous processing techniques.
- Reduced per-image processing latency from 20 seconds to 7 seconds through task parallelization.
- Tech Stack : **Django, PostgreSQL, Celery, Redis, Docker, OpenCV.**
